

COOKING
FOR LIFE

A close-up photograph of a woman and a young girl. The woman, on the right, is wearing a patterned headscarf and has her arm around the girl's shoulder. Both are smiling warmly at the camera. The girl, on the left, has her hair in pigtails and is wearing a pink top.

**WE
BREATHE
EASY**

In some countries taking a deep breath might mean risking your life. Disease and illness brought on by indoor air pollution claim the lives of two million people each year. Almost all of these deaths occur in low-income countries where using traditional cooking fuels, such as wood and charcoal, are the only options available. The COOKING FOR LIFE global campaign is working to prevent these avoidable health risks by introducing LP Gas as a clean and safe alternative cooking fuel. Alongside governments, NGO organisations, and the energy industry we are working to save lives and make sure everyone can breathe easier.

Together we can fuel solutions in the home.
