This three-hour webinar workshop, to be held on Tuesday 15<sup>th</sup> December 2020, is being organised by the WLPGA for the LPG industry in The Philippines.

Key topics for discussion include the importance of Good Business Practices, the need for synergy with Government policies, the role of LPG in The Philippine's energy portfolio, and the need for an LPG Roadmap.

The objective of the webinar workshop is to facilitate a discussion around the importance of having LPG as a key part of a country's future energy policy and what long term plans need to be considered to make that happen.

The webinar workshop will be of interest to LPG stakeholders in The Philippines, including representatives from Government Ministries responsible for energy, health, transport, environment, trade, industry, commerce as well as the related regulatory agencies, national standard bodies, consumer organisations, LPG producers, importers, transporters, distributors and other LPG value chain players. Non-governmental organisations (NGO's) and financial/funding institutions will also find it useful.

The webinar workshop will cover topics that provide an important overview of the value that LPG brings to a country including initiatives such as the latest developments in successfully transitioning away from harmful traditional cooking fuels - such as wood, agricultural and animal waste (including cow dung) and charcoal - to LPG; LPG for power generation and boilers; and synthetic natural gas (SNG). In particular what action is necessary to encourage the safe and sustainable penetration of LPG growth in all sectors, through the application of good business practices, and to demonstrate the importance of the use of LPG in eliminating preventable illness and promoting better quality of life in the home, as well as preventing deforestation and stimulating the economy.

The webinar workshop will include:

- a) An overview of the global LPG business and assess the latest supply, demand, and pricing dynamics
- b) National Policies that have facilitated LPG into the national energy mix
- c) The importance of an LPG Roadmap for the next decade
- d) The importance of the LPG value chain
- e) Opportunities for LPG in The Philippines
- f) The LPG industry post COVID-19
- g) Autogas – global best practices to promote LPG as a transport fuel
- h) LPG – a tool for cleaner air quality and offsetting climate change
- i) LPG - a viable prevention to deforestation
- j) LPG - a catalyst to economic development
- k) The opportunities for the Internet of Things (IoT) on improving the LPG business
- l) New applications for LPG to add value
